38SHK-GRN -----	3/8" Shackle - Heavy duty

FEATURES

The **RED IRON RESTRAINT** system is designed to help contain high-pressure piping and components in case of rupture during the pumping process. The destructive force of an unrestrained flow line rupture, regardless of the cause, can be devastating and catastrophic to both people and equipment.

Installation of the RED IRON RESTRAINT system can help producers and well service providers deliver on a commitment to safety at the well site.

- Engineered approved system
- Meets provincial legislation including WorkSafe BC
- Easy half hitch with shackles installation
- Multiple lengths and sizes available
- Anchoring provides 100% security that runs the full length of the flow line
- NEW Ultra-light options available that are half the weight of regular restraints
- Does not require pull test for re-cert
- Re-certification services available
- Certified training available
- Rental packages available
- Topco supplied installation services available
- 24 hour / 7 days a week service
